

# **Chemotherapy Protocol**

#### **HEAD AND NECK CANCER**

## CISPLATIN (75)-DOCETAXEL(75)-FLUOROURACIL(4000)

#### **Regimen**

• Head and Neck Cancer – Cisplatin(75)-Docetaxel(75)-Fluorouracil (4000)

#### **Indication**

• Advanced squamous cell carcinoma of the head and neck

#### **Toxicity**

Drug	Adverse Effect		
Cisplatin	Neuropathy, nephrotoxicity, ototoxicity		
Docetaxel	Hypersensitivity, fluid retention, neuropathy, joint pains, nail changes, fatigue		
Fluorouracil	Diarrhoea, stomatitis		

The adverse effects listed are not exhaustive. Please refer to the relevant Summary of Product Characteristics for full details.

## Monitoring

## Drugs

- FBC, LFTs and U&Es prior to each cycle
- Patients with complete or partial dihydropyrimidine dehydrogenase (DPD) deficiency are at increased risk of severe and fatal toxicity during treatment with fluorouracil. All patients should be tested for DPD deficiency before initiation (cycle 1) to minimise the risk of these reactions

#### **Dose Modifications**

The dose modifications listed are for haematological, liver and renal function and drug specific toxicities only. Dose adjustments may be necessary for other toxicities as well.

In principle all dose reductions due to adverse drug reactions should not be re-escalated in subsequent cycles without consultant approval. It is also a general rule for chemotherapy that if a third dose reduction is necessary treatment should be stopped.

Please discuss all dose reductions / delays with the relevant consultant before prescribing, if appropriate. The approach may be different depending on the clinical circumstances.

## Haematological

Consider blood transfusion if patient symptomatic of anaemia or has a haemoglobin of less than 8g/dL.

Criteria	Eligible Level		
Neutrophils	1.5x10 <sup>9</sup> /L or greater		
Platelets	100x10 <sup>9</sup> /L or greater		

Defer treatment for 7 days if the neutrophil count is less than  $1.5 \times 10^9$ /L and / or the platelet count is less than  $100 \times 10^9$ /L. If the counts have recovered to these levels at 7 days resume treatment. Consider using a 75% dose reduction. If the counts do not recover delay a further seven days. If they are satisfactory at 14 days treatment can be re-started using a 50% dose reduction.

#### Hepatic Impairment

Drug	Bilirubin (µmol/L)	Alk Phos	AST/ALT units	Dose		
Cisplatin	N/A	NA	N/A	No dose reduction necessary		
Docetaxel	NA	2.5xULN or greater	1.5xULN	Give 75%		
	Greater than ULN	6xULN or greater	3.5xULN or greater	Not recommended		
Fluorouracil	less than 85	NA	less than 180	100%		
	more than 85	NA	more than 180	Contra-indicated		

## Renal Impairment

Drug	Creatinine Clearance (ml/min)	Dose (% of original dose)	
	more than 60	100	
Cisplatin	45-59	75	
	less than 45	consider carboplatin	
Docetaxel	No dose adjustment req		
Fluorouracil		Consider dose reduction in severe renal impairment only	

# Other

A cycle of chemotherapy should be delayed for up to two weeks to allow for a reduction in the severity of toxic events of NCI-CTC grade 3 or more to a severity of NCI-CTC grade 1 or less (with the exception of alopecia, fatigue, malaise, and nail changes). Delays beyond two weeks required discontinuation of chemotherapy

## Cisplatin

Modifications in the dose of cisplatin are necessary for peripheral sensory and motor neurotoxicity, ototoxicity, or nephrotoxicity. Consider stopping treatment for patients with neurotoxicity or ototoxicity of NCI-CTC grade 3 or more.

## Docetaxel

## Lacrimation

Excessive lacrimation is related to cumulative docetaxel doses and occurs after a median of 400mg/m<sup>2</sup>. Symptomatic treatment with hypromellose 0.3% eye drops four times a day may help. However, if the ocular irritation continues reduce the docetaxel dose to 60mg/m<sup>2</sup>.

#### Skin

Delay the docetaxel where a NCI-CTC grade 3 cutaneous toxicity is present on day one of the cycle until it resolves to NCI-CTC grade 1 or below. The subsequent doses of docetaxel should be reduced from 75mg/m<sup>2</sup> to 60mg/m<sup>2</sup>. If it occurs with a dose of 60mg/m<sup>2</sup> or if there is no recovery after two weeks, docetaxel treatment should be stopped. Where a NCI-CTC grade 3 cutaneous toxicity occurs between cycles with recovery by day one then reduce the docetaxel dose as described. Docetaxel should be stopped in response to a NCI-CTC grade 4 cutaneous toxicity.

#### Fluorouracil

Modifications in the dose of fluorouracil are necessary for mucositis and diarrhoea.

## **Regimen**

## 21 day cycle for 4 cycles

Drug	Dose	Days	Administration
Cisplatin	75mg/m²	1	Intravenous infusion in 1000ml sodium chloride 0.9% with 20mmol potassium chloride at a maximum rate of 1mg cisplatin/min (minimum time 120 minutes)
Docetaxel	75mg/m <sup>2</sup>	1	Intravenous infusion in 250ml sodium chloride over 60 minutes
Fluorouracil	1000mg/m <sup>2</sup>	1, 2, 3, 4	The total dose (4000mg/m <sup>2</sup> ) is given as an intravenous infusion over 96 hours

## **Dose Information**

- Cisplatin will be dose banded in accordance with the national dose bands (1mg/ml)
- Docetaxel will be dose banded in accordance with the national dose bands (20mg/ml)
- Docetaxel induced fluid retention can lead to weight gain. This is not a reason to alter the doses
- Docetaxel doses of more than 200mg should be diluted in 500ml sodium chloride 0.9% (maximum concentration 0.74mg/ml)
- Fluorouracil will be dose banded in accordance with the national dose bands (50mg/ml)

## Administration Information

## Extravasation

- Cisplatin exfoliant
- Docetaxel exfoliant
- Fluorouracil inflamitant

#### Other

- Docetaxel hypersensitivity reactions tend to occur with the first or second infusion. For minor symptoms such as flushing or localised rashes the infusion should not be interrupted. For severe reactions including profound hypotension, bronchospasm and generalised erythema discontinue the infusion immediately.
- The fluorouracil is given as a continuous infusion over 24 hours. A central or PICC line is recommended for treatment to commence and continue.

## Additional Therapy

- Antiemetics
  - 15-30 minutes prior to chemotherapy
    - aprepitant 125mg oral day
    - aprepitant 80mg oral days 2, 3
    - ondansetron 8mg twice a day oral for 5 days

#### As take home

- metoclopramide 10mg three times a day when required oral

• Cisplatin pre and post hydration as follows;

Pre

Furosemide 40mg oral or intravenous

1000ml sodium chloride 0.9% with 20mmol potassium chloride and 16mmol magnesium sulphate over 60 minutes

Post

1000ml sodium chloride 0.9% with 20mmol potassium chloride and 16mmol magnesium sulphate over 60 minutes

Patients should be advised to drink at least 3 litres of fluid in the 24 hours after administration of cisplatin.

- Docetaxel premedication with dexamethasone 8mg oral twice a day the day before, 8mg once a day the day of and the day after docetaxel
- Ciprofloxacin 500mg twice a day for 10 days starting on day 5 of the cycle
- Growth factor according to local formulary choice. For example;

- filgrastim or bioequivalent 30mU once a day subcutaneous for seven days starting on day five of the cycle

- lenograstim or bioequivalent 33.6mU once a day subcutaneous for seven days starting on day five of the cycle

- pegfilgrastim or bioequivalent 6mg once a day subcutaneous on day two
- Oral loperamide 4mg after the first loose stool then 2-4mg four times a day when required for the relief of diarrhoea (maximum 16mg/24 hours).
- Mouthwashes as per local or national guidelines
- Gastric protection with a proton pump inhibitor or a H<sub>2</sub> antagonist may be considered in patients considered at high risk of GI ulceration or bleed

# **REGIMEN SUMMARY**

Cisplatin(75)-Docetaxel(75)-Fluorouracil(4000)

# Cycle 1, 2, 3

# **Day Minus 1**

1. Dexamethasone 8mg twice a day\*

## Day 1

- 1. Aprepitant 125mg oral
- 2. Dexamethasone 8mg oral (from TTO)\*
- 3. Ondansetron 8mg oral or intravenous
- 4. Docetaxel 75mg/m<sup>2</sup> in 250ml sodium chloride 0.9% over 60 minutes
- 5. Furosemide 40mg oral or intravenous
- 6. 1000ml sodium chloride 0.9% with 20mmol potassium chloride and 16mmol magnesium sulphate over 60 minutes
- Cisplatin 75mg/m<sup>2</sup> intravenous infusion in 1000ml sodium chloride 0.9% with 20mmol potassium chloride at a maximum rate of 1mg cisplatin/minute (minimum time 120 minutes)
- 8. 1000ml sodium chloride 0.9% with 20mmol potassium chloride and 16mmol magnesium sulphate over 60 minutes
- 9. Fluorouracil 4000mg/m<sup>2</sup> continuous intravenous infusion over 96 hours

## **Take Home Medicines**

- 10. Aprepitant 80mg once a day for two days starting on day two of the cycle
- 11. Dexamethasone 8mg twice a day the day before, 8mg once a day the day of and the day after docetaxel
- 12. Ondansetron 8mg twice a day for five days starting on the evening of day one of the cycle
- 13. Metoclopramide 10mg three times a day when required for the relief of nausea
- 14. Ciprofloxacin 500mg twice a day for 10 days starting on day five of the cycle

#### 15. Growth factors according to local formulary choice

- filgrastim or bioequivalent 30mU once a day for 7 days starting on day 5 of the cycle subcutaneous
- lenograstim or bioequivalent 33.6mU once a day for 7 days starting on day 5 of the cycle subcutaneous
- pegfilgrastim or bioequivalent 6mg once only the day after the last day of chemotherapy subcutaneous

#### Cycle 4

#### **Day Minus 1**

16. Dexamethasone 8mg twice a day\*

#### Day 1

- 17. Aprepitant 125mg oral
- 18. Dexamethasone 8mg oral (from TTO)
- 19. Ondansetron 8mg oral or intravenous
- 20. Docetaxel 75mg/m<sup>2</sup> in 250ml sodium chloride 0.9% over 60 minutes
- 21. Furosemide 40mg oral or intravenous
- 22.1000ml sodium chloride 0.9% with 20mmol potassium chloride and 16mmol magnesium sulphate over 60 minutes
- 23. Cisplatin 75mg/m<sup>2</sup> intravenous infusion in 1000ml sodium chloride 0.9% with 20mmol potassium chloride at a maximum rate of 1mg cisplatin/minute (minimum time 120 minutes)
- 24.1000ml sodium chloride 0.9% with 20mmol potassium chloride and 16mmol magnesium sulphate over 60 minutes
- 25. Fluorouracil 4000mg/m<sup>2</sup> continuous intravenous infusion over 96 hours

#### **Take Home Medicines**

- 26. Aprepitant 80mg once a day for two days starting on day 2 of the cycle
- 27. Ondansetron 8mg twice a day for five days starting on the evening of day 1 of the cycle
- 28. Metoclopramide 10mg three times a day when required for the relief of nausea
- 29. Ciprofloxacin 500mg twice a day for 10 days starting on day five of the cycle

#### **30.** Growth factors according to local formulary choice

- filgrastim or bioequivalent 30mU once a day for 7 days starting on day 5 of the cycle subcutaneous
- lenograstim or bioequivalent 33.6mU once a day for 7 days starting on day 5 of the cycle subcutaneous
- pegfilgrastim 6mg once only the day after the last day of chemotherapy subcutaneous
- \* In Aria Planner the dexamethasone 8mg twice daily will appear on days 1, 2, 3 of treatment. This is the supply for the next cycle. The administration instructions reflect this. On the last cycle no dexamethasone will appear for prescribing.
